1 of 65. A developer must create a CreditCardPayment class that provides an implementation of an existing Payment class.

```
public virtual class Payment {  
    public virtual void makePayment(Decimal amount) { /*implementation*/ }  
}
```

Which is the correct implementation?

- A. ☐ public class CreditCardPayment implements Payment {
 public override void makePayment(Decimal amount) { /*implementation*/ }
}
- B. ☐ public class CreditCardPayment extends Payment {
 public virtual void makePayment(Decimal amount) { /*implementation*/ }
}
- C. ☒ public class CreditCardPayment extends Payment {
 public override void makePayment(Decimal amount) { /*implementation*/ }
}
- D. ☐ public class CreditCardPayment implements Payment {
 public virtual void makePayment(Decimal amount) { /*implementation*/ }
}

3 of 65. A recursive transaction is initiated by a DML statement creating records for these two objects:

- Accounts
- Contacts

Within the transaction, the Account trigger hits a stack depth of 16.

Which statement is true regarding the outcome of the transaction?

A. ☐ The Account records are rolled back and the Contact records are committed.

B. ☒ The transaction succeeds and all changes are committed to the database.

C. ☐ The transaction fails and all the changes are rolled back.

D. ☐ The transaction fails only if the Contact trigger stack depth is greater or equal to 16.

8 of 65. Universal Containers (UC) uses a custom object called Vendor. The Vendor custom object has a master-detail relationship with the standard Account object.

Based on some internal discussions, the UC administrator tried to change the master-detail relationship to a lookup relationship, but was not able to do so.

What is a possible reason that this change was not permitted?

A. ☐ Some of the Vendor records have null for the Account field.

B. ☒ The Account object has a roll-up summary field on the Vendor object.

C. ☐ The Account object does not allow changing a field type for a custom field.

D. ☐ The organization wide default for the Vendor object is Public Read/Write.

35 of 65. Universal Hiring is using Salesforce to capture job applications. A Salesforce administrator created two custom objects: `Job__c` acting as the master object, `Job_Application__c` acting as the detail.

Within the `Job__c` object, a custom multi-select picklist, `Transferred_Locations__c`, contains a list of approved states for the position. Each `Job_Application__c` record relates to a Contact within the system through a master-detail relationship.

Recruiters have requested the ability to view whether the Contact's Mailing State value matches a value selected on the `Transferred_Locations__c` field, within the `Job_Application__c` record. Recruiters would like this value to be kept in sync. If changes occur to the Contact's Mailing State or if the Job's `Transferred_Locations__c` field is updated.

What is the recommended tool a developer should use to meet the business requirement?

A. ☐ Record-triggered flow

B. ☒ Apex trigger

C. ☐ Process Builder

D. ☐ Formula field
